My Portfolio: <https://stessman.github.io/updated-portfolio/>

## Skills

- Java
- SQL
- C#
- Node
- MySQL
- HTML
- CSS
- JavaScript
- Express

## Experience

June 2016 - May 2018

**tap|QA (Dell Computer & Praeses) – QA/Test Automation Consultant**

- Extended core Selenium API to increase stability of tests validating business logic.
- Participated in weekly scrum meetings to discuss goals and tasks to be completed.
- Involved in design and development of data-driven automation framework using Selenium Webdriver and C#.
- Communicated test results with team members to discuss issues and possible fixes.
- Wrote automated test scripts from test cases based on priority of use.
- Participated in code reviews with team members to ensure quality and standards were being upheld.

June 2016 - May 2018

**Maverick Software Consulting (Thomson Reuters) – Software Engineer Intern**

- Provided automated testing using Ruby, Cucumber and Calabash for Android.
- Managed the upkeep of the automated test scripts.
- Participated in code reviews for automated test scripts.
- Wrote scripts for automated testing using Ruby and Cucumber.
- Performed manual regression tests using multiple testing environments.
- Assisted in the interview process to help evaluate potential employees.
- Trained new employees on best coding practices and testing techniques.

## Education

August 2011 - May 2016

**Minnesota State University, Mankato – Computer Information Technology**

Minor: Technical Communication

April 2021 - Present

**University of Minnesota** – *Coding Bootcamp*

## **Projects:**

**IDK, You Pick** – *HTML, CSS, JavaScript*

<https://scoven2.github.io/Group-Collaboration/>

This was for my first group project for my web development bootcamp. This site is for people that are commonly unsure of what type of food to make or what movie to watch. They can use this site to solve both of these questions for them.

**E-Commerce Back-end**– *JavaScript, MySQL, Node*

<https://github.com/stessman/E-Commerce-Back-End>

This application allows the user to make GET, POST, PUT, and DELETE requests using test data similar to that of an E-commerce backend.

**Paws and Pals – Pet Shelter**– *HTML, CSS, JavaScript, MySQL, Express, MVC, Handlebars*

<https://github.com/stessman/Project-2>

This application is used as a layout for a pet shelter. This application allows for any user to view the current animals at the shelter. Users are able to create an account and when they do they will be able to add animals to the shelter.
